

Energy Efficient Alberta: Rebates & Information

There has been a lot of talk about the **Government of Alberta** releasing **incentives** for Individual Businesses, Non-profit Organizations, Institutions, Co-operatives and Residences to upgrade to become more **Energy Efficient**.

This helps our environment, the world, and most importantly saves you money on **Material, Install & Maintenance** when upgrading, not to mention the big savings on your **Energy, Water and Gas Bills!**

On **May 23, 2017**, our Provincial Government released all the information about the incentives; **How to Apply, Who is Eligible, What is covered, Amount of Savings** and their **Limits**. I thought we should help you get the ball rolling by explaining how this can benefit you and/or your company as soon as possible **before it's too late**.

- **Alberta has a \$ 10, 000, 000 limit on these incentives.**
(This money won't last long!)
- **Each location has a maximum of \$ 60,000 that they can claim.**
(If you have more than one location you can claim up to \$ 60,000 for each location)

How Myarc Electric Ltd. can help:

Not only do these incentives help you save money but it has also helped our company gain some new customers and business, through this process so far this is what we have found:

- You can **Claim nearly 50% of your quoted electrical invoice** *(This includes fixtures, bulbs and install costs)*
- You can **Claim \$ 300** in rebates for **Each Class 1 Division 2 LED fixture** that we manufacture.
- You can **Claim \$ 200** in rebates for **Each High Bay LED Fixture**. *(4' x 2' fixture)*
- You can **Claim \$ 45** in rebates for **Each 165W LED Bulb**. *(Fixtures are popular in shops and warehouses and currently use 400W Metal Halide Bulbs.)*
- By scheduling a **Free Quote** with us at Myarc Electric we can speed up this process for you by submitting a **Pre- Approval Application**.

*Those 2 fixtures and bulb examples are most popular from the long list of upgrading rebates **Energy Efficiency Alberta** offers.*
